To whom it may be concern

Ação Engenharia is the sole agent for *Elspec's* products in *Brazil*. Our experince with *Elspec's* equipment is excelent. Recently, we install 3 units *Elspec's Activar* systems in *Albert Einstein Hospital* in São Paulo, which is the most prestigious and modern Hospital in *Brazil*. As far as we are concern, the *Elspec's* units are far better then the electromechanical systems. Among the reasons that *Elspec's Activar* where selected by the hospital are:

- ❖ Transient Free capacitor groups switching, help to protect hospital sensitive electronic equipment.
- ❖ Improve Power Quality by preventing, voltge drops, flickering and transients.
- ❖ On line Harmonics Filtration in real time.
- ❖ Energy saving.
- ❖ Scan Mode which lowers the temperature within the groups.
- ❖ Longer life expectancy of switching elements and capacitors.
- ❖ Very accurate Power Factor controller taking into account harmonics distortion and three phases average load.
- ❖ Controller which is also a measurement analyzer with 5" LCD display.
- ❖ PowerIQ measurement and analysis software (possible up-grade) working under Windows 95,98, NT and 2000.
- ❖ Communication Port RS-485, Portocol Modbus/RTU.(upgradeable)

atenciously
